PROFESSIONAL EXPERIENCE

GEICO
Data Infrastructure Engineer II, Palo Alto, CA — January 2026 – August 2026
- Cut analytical query latency from 10+ minutes to sub-second at 160+ TB/day with no critical data loss by re-architecting the telemetry ingestion pipeline in Go and Python around Kafka, OpenTelemetry, and ClickHouse.
- Scaled a multi-tenant ClickHouse storage layer serving engineering teams company-wide by owning schema and partitioning design, capacity planning, and Kubernetes deployment end to end.

Data Infrastructure Engineer I, Remote — July 2024 – January 2026
- Delivered the single source of truth for production health across thousands of services by building and operating the unified observability platform (Grafana, Prometheus, Loki) on Azure Kubernetes with Terraform at 160+ TB/day.
- Eliminated $12M in annual Splunk licensing by leading the company-wide migration onto the in-house platform, building automated query-translation and asset-transformation workflows in Python and an observability-as-code system in Jsonnet.

ACCENTURE
Tech Intern, Chicago, IL — June 2023 – August 2023
- Increased downstream-team engagement with Operations Studio services by leading end-to-end development of an internal website.

AMADOR BIOSCIENCE
Software Development Intern, Ann Arbor, MI — May 2022 – August 2022
- Streamlined production of clinical tables, listings, and figures by leading three interns in the full-stack development of an internal analysis tool in R Shiny and C++, and set unit-testing and documentation standards.

TECHNICAL SKILLS

Languages: Python, Go, TypeScript, C++, SQL, Bash, Jsonnet
Infrastructure: Kubernetes, Azure, Linux, Terraform, CI/CD, Kafka, Docker, ClickHouse, MongoDB, OpenTelemetry
ML & LLM Systems: PyTorch, RAG, agent harnesses, Milvus, Atlas Vector Search, LangSmith, Azure AI Foundry

PROJECTS

RIPPLE — September 2026
Self-evolving agent harness in TypeScript on MongoDB Atlas – 1st Place, MongoDB Harness Engineering Hackathon
- Won 1st place of 98 teams with three classmates by building an agent harness that designs PCBs from plain-English specs, grades them against hidden checks, and rewrites its own rules and model routing from failures, raising held-out pass rate from 0/4 to 3/4.

ASKMARTIN SLACK ASSISTANT — July 2025
RAG-powered Slack assistant in Python using Milvus, Nomic Embed, and LangSmith – Winner, GEICO 2025 AI Hackathon
- Won 1st place of ~90 teams by leading 6 engineers to build an assistant that auto-resolves questions in any Slack help channel via multi-source, channel-specific retrieval, designed to reclaim up to ~20% of on-call support capacity.

UNIVERSAL LESION SEGMENTATION WITH TRANSFORMERS — January 2024 – May 2024
- Achieved a 0.87 Dice score on bone lesions by benchmarking nnU-Net v2, Swin-UNet, DeepLabV3+, Medical Transformer, and TransUNet for 3D lesion segmentation in PyTorch, tackling overfitting and GPU-memory limits with augmentation.

EDUCATION

CORNELL UNIVERSITY, CORNELL TECH — New York, NY
Master of Engineering in Computer Science — August 2026 – Expected May 2027
- Relevant Coursework: Algorithms for Applications, Robot Perception

VANDERBILT UNIVERSITY — Nashville, TN
Bachelor of Science in Computer Science, Bachelor of Arts in Economics, Minor in Data Science — August 2020 – May 2024
- Cum Laude; Vanderbilt School of Engineering Dean's List (8 semesters); Tau Beta Pi Engineering Honor Society — GPA: 3.86/4.00
- Relevant Coursework: Deep Learning, Projects in Machine Learning, Operating Systems, Computer Networks

LEADERSHIP & CERTIFICATIONS

CORNELL TECH STUDENT GOVERNMENT, ***MEng CS Program Representative***, New York, NY — August 2026 – Present
VANDYHACKS HACKATHON CLUB, ***Design Board***, Nashville, TN — February 2022 – May 2024
NVIDIA-Certified Associate: Generative AI LLMs; NVIDIA: Building LLM Applications with Prompt Engineering
